

Following is an update on The Maiman Company's successful raised panel fire door testing, based on positive pressure standards UBC 7.2-1997, and UL 10C. These listings are with U.L. and are as follows:

	<b><u>20 minute</u></b>	<b><u>45 minute</u></b>
Max. sizes (singles)	48" x 108"	36" x 96"
Max. sizes (pairs)	96" x 108"	72" x 96"
Min. Thickness	1 3/4"	1 3/4"

Some highlights of the new product line include:

20 minute doors can now be glazed with our own "wood bead" lite kit. The 20 minute doors can contain multiple lites or various combinations of lites and panels.

Our 20 minute doors can bear an "S" label, also, with gasketing system from Zero International. This includes a perimeter gasketing (vinyl bulb #824), which applies to the doorstop, and concealed intumecent strips. Active leaves of pairs require a #59FS mortised astragal at the meeting stile (visible). As an alternative, we can achieve 20 minute fire and smoke protection using a Lorient Intumescent Batwing gasket.

Contact the factory if further information is required.
